SKILLS

Programming Languages: Python, SQL, JavaScript, C#, Java, C, C++

Web & Frameworks: React, .NET Core, Flutter (Dart), HTMX, Bootstrap, HTML, CSS

Databases: PostgreSQL, MySQL, Microsoft SQL Server, MongoDB, Qdrant, SQLite

Other: RAG, NLP, Scikit-learn, Spark, Streamlit, Docker, Git, GitHub, Azure DevOps, Postman, Figma

Languages: Khmer (Native), English (Intermediate), Thai (Advanced)

EDUCATION

Prince of Songkla University, Thailand

Bachelor of Mathematics and Computer Science | Major: Data Science | Cumulative GPA: 3.68/4.00 (First Class Honors)

PROFESSIONAL EXPERIENCE

AI Engineer Cooperative Internship

Max Savings (Bangkok, TH)

November 2025 - March 2026

Built an intelligent customer service chatbot using RAG to provide context-aware responses.

Accomplishments:

- Designed responsive chatbot UI in Figma for both desktop and mobile, maintaining a consistent user experience across devices.
- Built an end-to-end RAG system with .NET Core that handles document processing, generates embeddings, and uses LLMs to power customer support responses.
- Implemented chunking strategies (fixed-size and semantic) to improve document retrieval, storing embeddings in Qdrant for similarity search.
- Tested RAG accuracy using NLP metrics like BLEU, GLEU, and F1 scores to track improvements over time.

Full Stack Developer Internship

Biomass Exchange (Bangkok, TH)

April 2025 - July 2025

Accomplishments:

- Developed an asynchronous email system with Golang that automates user communications and sends notifications efficiently.
- Led database schema design for notification features, ensuring data integrity and scalability to support growing transaction volumes.
- Built a booking history feature with full CRUD operations (edit, update, delete), making the platform more functional and improving user workflows.

PROJECTS

Portfolio website: chornchhery.github.io (for additional information and projects)

Real-Time IoT Poultry Monitoring System: github.com/ChornChhery/Chicken-Farm-IOT

Automated farm monitoring system with data streaming, validation, and intelligent alerting.

- Built a real-time IoT monitoring system with automated data ingestion into MongoDB, enabling continuous tracking of poultry growth metrics for farm optimization.
- Developed a data validation pipeline filtering sensor readings to achieve 95% data accuracy, cleaning and preparing raw data for reliable analytics.
- Built a real-time dashboard visualization and automated LINE notifications for growth anomalies, helping farmers respond faster to issues.

Mobile POS Application: github.com/ChornChhery/Jame

End-to-end mobile point-of-sale system with analytics dashboard and inventory management.

- Developed a comprehensive POS mobile application for department business management, integrating real-time barcode scanning and automated PDF receipt generation.
- Built an analytics dashboard with visual insights into revenue trends, product stocks, best-selling items, and profit margins to support data-driven business decisions.
- Managed product inventory with barcode-based stock updates, automated low-stock alerts, and real-time pricing calculations to streamline operations.
